

Report on the Noxious and Beneficial Insects of the State of Illinois Volume 27

By Illinois State Entomologist

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 edition. Excerpt: .as the beetle develops within. It is formed in a definite cavity or cell within an infested grain. Development may be greatly retarded, or even arrested, by cold weather, the insect living on in whatever stage it may have reached. A generation may develop in three to six weeks, according to temperature. The larvae may reach full size in about sixteen days. This weevil is especially troublesome southward, where it infests corn in the field and afterwards in the crib. The beetles begin to deposit their eggs in the South, early in June, and continue until the corn is ripe, adults emerging in about a month after the eggs are placed. This weevil may infest most of the cereals, and is especially common in rice. It has also been found in tobacco, in boxes of crackers and cakes, in macaroni, and other bread stuffs,...
