Reviews

Comprehensive guide! Its this type of very good read through. It is actually writter in simple words and phrases rather than difficult to understand. It is extremely difficult to leave it before concluding, once you begin to read the book.

Brand New Book ***** Print on Demand *****.Excerpt from A Course on the Stresses: In Bridge and Roof Trusses, Arched Ribs and Suspension Bridges, Prepared for the Department of Civil Engineering at the Rensselaer Polytechnic Institute Since the publication of the first edition of this book engineering practice in iron and steel construction, especially in the department of bridge building, has made very material progress. The distribution of metal in pin structures has been considerably modified so as to produce concentrations in larger members; but chiefly the treatment of moving loads has experienced such a radical transformation as to bring it to a thoroughly rational basis. Hence, portions of the book as originally written have been cancelled and replaced by entirely new matter, so amplified and extended as to bring the work in all its details abreast of the best practice of the present day. My indebtedness to the published papers of Prof. H. T. Eddy, of the University of Cincinnati, on the arched rib, will be evident to any reader even slightly acquainted with his valuable work entitled Researches in Graphical Statics. Certain matters are of such common occurrence in the following pages that it may conduce to clearness to mention them here. The word ton signifies a ton of 2,000 pounds, unless it is otherwise specifically stated. The word stress means the force acting in any member of a structure, while strain is the distortion which accompanies the stress. The sign + indicates a tensile stress, and the sign -, a compressive one. Unless otherwise stated, the stress in any member of a structure will be represented by inclosing with a parenthesis the letter or letters which belong to it in the...
