Conceptual model developed by Holland et al. ( 2004 ) identifying linkages between development of the upland and the ecological response of South Carolina tidal creeks. Ranges of impervious cover percent denoting transition from one model phase to the next are shown at the bottom of the model. The overall goals of the sentinel habitat study were: 1 ) to evaluate the applicability of the current tidal creek classification framework and conceptual model linking urban and suburban growth to tidal creek ecological condition and potential impacts on ecosystem function, including human health and well-being, in the southeast region through collaborations with Sapelo Island NERR and North Carolina NERR; and 2 ) to support the transfer of this information data to appropriate coastal managers to improve decision making related to land use development issues and human health concerns in the Southeast. Results of this study are presented here in Volume I of a two-volume report for the overall NERRS project. Results of the probabilistic survey of ecological condition throughout subtidal waters of the four North Carolina NERR sites are presented in the companion Volume II. 2. Methods 2. 1 Study Sites Nineteen tidal creek networks located from New Hanover County,...
