Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English Brand New Book ***** Print on Demand *****.Excerpt from **Statics by Algebraic and Graphic Methods: Intended Primarily for Students of Engineering and Architecture** This volume has been written in the hope of helping students of engineering and architecture to acquire a knowledge of Statics which will include the power to apply it correctly in professional work. To this end an attempt has been made to carry out several specific purposes, prominent among which may be mentioned the following: 1. To give much attention to the starting points of the science, and to make as clear as possible the course of deduction therefrom. 2. To point out the inherent mathematical limitations of pure Statics, and to show how all its important problems are solved. 3. To develop algebraic and graphic methods of solution, or, if one prefer the terms, Analytical and Graphical Statics, side by side and with equal thoroughness. 4. To present a graded set of problems illustrating not only universal principles but also how Statics is used in engineering practice. 5. Finally, to keep the book of a size commensurate with the small amount of new matter which the reader, versed in the simplest operations of elementary mathematics, need master to gain the desired end. It may be pointed out that the phrases Analytical Statics and Graphical Statics are avoided. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
